Available January-June 2027 for a six-month final-year project / internship

Education

Software Engineering

MedTech, South Mediterranean University | Expected graduation: June 2027

Professional Experience

Ooredoo Tunisia | Software Development Intern

June-August 2025 | React, Java, Spring Boot, Apache POI, jsPDF

- Built an internal dashboard for exploring Excel datasets through a React interface and a Java/Spring Boot API.
- Implemented spreadsheet uploads, dataset switching, column filters and text search; retained selected filters in browser storage.
- Generated PDF reports from filtered results using jsPDF and AutoTable so findings could be shared outside the dashboard.

FORVIA Tunisia | Software Testing Intern

July 2023 | Three-week school internship | Selenium, C

- Wrote and executed automated software tests with Selenium in an engineering environment.
- Built C testing utilities, analysed test outputs and documented results to support software validation.

Selected Projects

Enterprise Document Intelligence Platform

[Source code](#) | Python, Streamlit, SentenceTransformers, Ollama / Qwen3

- Built a local document question-answering prototype: users upload PDF, Markdown or text files and ask questions with source passages displayed alongside answers.
- Combined semantic and BM25 search with cross-encoder reranking and role-based document filtering to select evidence for the language model.
- Added retrieval evaluation with Hit@K and MRR, plus unit tests for role filtering, text chunking and metric calculations.

WorkHive | Service Booking Platform

React, React Native, Firebase, Tailwind CSS

- Developed web and mobile applications where customers book services and communicate with service providers through real-time messaging.
- Built Firebase backend services and role-based dashboards for managing bookings, conversations and users.

Software Engineering | Projects and Technical Skills

Selected Projects continued

Personal Study Notebook

[Source code](#) | React, JavaScript, Supabase, Tailwind CSS

- Built a personal study app for organizing language-learning notes into playlists and reviewing them with flashcard-style quizzes.
- Integrated Supabase authentication and note storage, with audio/video attachments and playback for study materials.
- Added a separate plain-text notebook with automatic saving and notes organized by study language.

Exploration of Tunis | Personal Place Tracker

Personal project

- Created an app to keep track of places visited in Tunisia and record personal ratings, making it easier to remember experiences and judge which places are worth revisiting.

Orange VR Museum | Virtual Reality Showcase

Unity

- Developed an interactive 3D museum in Unity to present Orange projects in an explorable virtual environment.
- Organized project information into a museum-style experience with navigation between the featured initiatives.

Technical Skills

Languages: Python, Java, C, JavaScript, TypeScript, SQL

Web and mobile: React, React Native, Vue.js, Express.js, Spring Boot, REST APIs

Data and AI: RAG, semantic search, SentenceTransformers, Ollama, Streamlit, Excel and PDF processing

Databases and platforms: Firebase, Supabase, MySQL, MongoDB, Unity

Tools and testing: Git, Selenium, Postman, Jira, Linux coursework and labs

Certifications

Python Programming | Universite Paris Dauphine - PSL

Advanced Relational Database and SQL | Coursera Project Network

C for Everyone: Programming Fundamentals | UC Santa Cruz / Coursera

Leadership

Lions Club | Human Resources Member

Supported club initiatives, internal communication and event logistics.
